

Scrap Battery Pallets

Ship core batteries on a solid skid.

Place a piece of flat cardboard under the bottom layer of batteries to prevent shifting or skidding. Once the layer is complete, put a piece of corrugated (waffle) cardboard down followed by another layer of core batteries.

Do not exceed 2500 lbs or 3 layers per pallet.

Wrap tightly with shrink wrap to the pallet to avoid shifting. Strap to pallet if available.

If flooded batteries, placard with Corrosive Hazmat placards.
