Eastern Manufacturing Inc. recommends that units are installed by a certified auto technician.

Bringing you more ways to help grow your exhaust business...

Global Leader in Catalytic Converters

Eastern has been in business for over 36 years and was one of the original manufacturers in the aftermarket catalytic converter industry. We pride ourselves on our Direct-fit catalytic converter coverage, the highest and fastest order fill rate in the industry, daily drop shipping,

vehicle-tested OE fit, and emission control catalysts that use actual OEM washcoats from the largest catalyst manufacturer in the world. At Eastern, all we do is manufacture and sell converters. That's what makes us the best converter manufacturer in the business.

Quality

World-class quality has earned Eastern Catalytic Converters certification in over 58 countries around the globe. Continual improvements in our design, production, and product delivery systems have made Eastern the smart choice in catalytic converters.

Coverage

Eastern's coverage for cars, light trucks, SUVs, and vans is the best in the industry. Our Direct-fit line now includes over 2,200 part numbers with coverage for over 100,000 applications. Our Universal line has over 800 SKUs in configurations to fit over 95% of the registered vehicles in U.S. and Canada.

Value

Compare Eastern's value to the competition. Our flexible, and efficient manufacturing facilities, in the US, Canada, Mexico, and the UK make our converter lines highly competitive. And, with Eastern, you're assured of quality and performance that meets or exceeds OEM specs.

Technology

We actively work to keep Eastern at the leading edge of converter technology. Our proprietary NANO technology chemistry yields highly efficient loadings for lower cost and better converter efficiency. Our continuing investments in the latest manufacturing equipment help us maintain industry-leading efficiency and productivity, to keep our prices competitive and our build-quality the best in the business.

ECO Series

Eastern ECO Series Converters – designed to help keep the Check Engine Light (MIL) off

Our new ECO series converters feature washcoats with greater loadings of precious metals to handle applications with ultra low emissions, or higher than normal emissions, as well as vehicles with higher mileage and heavier workloads. They're available in most Universal and Direct-fit applications for the broadest coverage and are fully compatible with second-generation on-board (OBD II) diagnostics.

ECO II

Designed to be effective on most complex or second generation on board diagnostic (OBD II) systems.

ECO III

Designed with twice the amount of rhodium to keep the Check Engine Light (MIL) off on vehicles with emissions that are out of the normal range.

ECO GM

Developed specifically to meet the emissions challenges of GM 2.2, 3.1, 3.4, and 3.8L engines. See page 04-05 for details.

ECO CARB

These converters are CARB compliant, and available in Universal and Direct-fit configurations for OBD II and pre-OBD II CARB vehicles.

GM check engine light problems?

Eastern ECO GM Converters are designed to help keep the Check Engine Light (MIL) off!

Our **ECO GM** converters were developed specifically to meet the emissions challenges of GM 2.2, 3.1, 3.4, and 3.8L engines.

The **ECO GM** catalyst has been engineered with a specially formulated precious metal and chemical content to meet the GM OBDII requirements. The catalyst washcoat was designed by the same supplier that originally supplied these OEM vehicles and is backed by Eastern's 5 year / 50,000 mile warranty!

Be sure to check any related TSBs and recall notices prior to changing any catalyst.

These known GM service conditions can result in damage to the catalytic converter:

Condition: Loss of coolant

Ref: Bulletin No.: 01-06-01-007C

Loss of coolant, coolant odor, having to add coolant or seeing a milky substance on either the oil dipstick or oil fill cap. Additionally, owners may indicate that there are signs of coolant loss left on the ground where the vehicle is normally parked.

Cause:

Condition may be due to coolant leaking past intermediate intake or throttle body gaskets.

Result:

Coolant entering the converter causes contamination of the substrate and/or the O2 sensors.

Condition: Loss of power

Ref: Special Policy Adjustment – Catalytic Converter # 05551

Vehicles affected: 2001-02 Chevrolet Impala, Monte Carlo, Pontiac Grand Prix, and Buick Regal models equipped with a 3.4L (RPO LA1 - VIN E) or 3.8L (RPO L36 - VIN K) V6 engine.

Cause:

May be due to the front endcone insulation from the catalytic converter breaking away and blocking the front of the first catalyst brick.

Result:

Prevents the free flow of exhaust gas through the converter. Loss of power, MIL light illumination.

Condition: Engine Coolant Leak

Ref: Subject 03034

Engine coolant may leak at the upper intake manifold throttle body gasket, or at the upper intake manifold to lower intake manifold gasket.

Vehicles affected:

All 2000-2002 and certain 2003 Chevrolet Impala and Monte Carlo, Pontiac Grand Prix and Bonneville, and Buick Regal, LeSabre, and Park Avenue models equipped with 3.8L V6 engine (RPO L36 - VIN Code K).

Result:

Coolant leak may result in a low engine coolant level and higher engine operating temperatures. Higher temperatures may burn or even melt the substrate.

Condition: Poor drivability and/or hard starts

Owner may comment on drivability symptoms or long, hard starts, sputter, rough idle and light or intermittent misfire. The Malfunction Indicator Lamp (MIL) may also illuminate.

Vehicles affected:

1994-1996 Buick Regal
1994-1999 Buick Century
1994-1998 Buick Skylark
1994-1996 Chevrolet Corsica, Beretta
1995-1999 Chevrolet Lumina, Monte Carlo
1996 Lumina APV
1997-1999 Chevrolet Malibu, Venture
1994-1996 Oldsmobile Cutlass Ciera
1994-1997 Oldsmobile Achieva, Cutlass Supreme
1996-1999 Oldsmobile Silhouette
1997-1998 Oldsmobile Cutlass
1999 Oldsmobile Alero
1994-1999 Pontiac Grand Am, Grand Prix
1996-1998 Pontiac Trans Sport
1999 Pontiac Montana with 3.1 L or 3.4 L V6 Engine
(VINs E, J, M - RPOs LA1, LG8, L82)

Cause:

Due to various factors, the fuel injectors may become restricted. At this point, no specific fuel, fuel constituent, or engine condition has been identified as causing the restriction. The restriction causes the engine to operate at a lean air fuel ratio.

Result:

Lean air fuel ratio may either trigger the MIL or cause the engine to develop various drivability symptoms. Higher operating temperatures may burn or even melt the substrate.

Condition: Fuel Leak

Ref: GM recall 04V090000 and service bulletin 03054B

Fuel leaks can occur that cause the engine to run rich, extend the crank times, and possibly store DTC codes. When coupled with charging, starter, or battery problems, the condition can lead to the possibility of a fire and/or intake manifold rupture or explosion resulting from a leaky fuel pressure regulator.

Cause:

Fuel leaks can be caused by a leaky or faulty fuel pressure regulator. When the regulator fails, fuel can leak past the rubber diaphragm inside of the regulator housing and raw fuel can then enter the intake manifold.

Result:

Raw fuel entering the converter can superheat the substrate causing it to melt.

Selecting the correct Direct-fit

Selecting the correct Universal Converter

- 1) Determine what type and size body you need
 - a) round unit or oval unit
 - b) long or short body
- 2) Select the correct engine size
- 3) Establish the gross vehicle weight (usually on the inside of the left front door jam)
- 4) Check to see if the replacement unit needs an air tube or O2 sensor fittings (all Eastern Catalytic Converter air tubes are capped)
- 5) Verify the correct position of the inlet and outlet
- 6) Measure the diameter of the O/E pipe to ensure that you have the right size inlet and outlet.
- 7) **Fix the problem that caused the original converter to fail before installing the new converter.**

Eastern recommends the use of ECO Series converters on all OBD II applications

Proper identification of a CARB emission system.

IMPORTANT NOTE: Before servicing any vehicle's catalytic converter, you must determine whether the vehicle was manufactured to CARB or Federal (EPA) specifications.

CARB vehicles can have exhaust system components that may be different from Federal vehicles. Vehicles that are not registered in CARB-compliant states, but are labeled

as having CARB emissions, can use catalytic converters in this catalog except for those labeled "With a Federal Emissions System."

All converters in this catalog are intended for Federal (EPA) vehicle applications and are not legal for sale or use in California.

- 2) On the strut tower plate
- 3) Under the engine hood

Remember: Fix the problem that caused the original converter to fail.

All products in this catalog are not legal for sale or use in California

We've got over 36 years of innovation.

100% of our research and development efforts goes into making the finest aftermarket and original equipment catalytic converters on the market. All of our converter washcoats come from the largest catalyst manufacturer in the world, ensuring maximum performance and the highest conversion of vehicle emissions of any catalytic converters available.

The fuel, engine, and exhaust systems

The Engine Control Module (ECM) monitors sensors in the fuel, engine, and exhaust systems. Each of these system components can affect the performance of the emissions system, and the failure of any of these components can cause damage to the catalytic converter.

When converter DTCs are not caused by the typical problems listed on the previous page, any or all of these components may need to be checked.

Engine management diagram provided courtesy of The National Institute for Automotive Service Excellence (ASE). Used with permission.

Remember: Fix the problem that caused the original converter to fail.

All products in this catalog are not legal for sale or use in California

www.easterncatalytic.com

Before installing a new converter:

Most catalytic converters fail due to engine related problems. Replacing the catalytic converter without diagnosing and repairing the cause of the failure may lead to another ruined converter.

A catalytic converter is designed to last the life of the vehicle. When malfunction in the catalytic converter is indicated, it is almost always the result of some other problem.

Signs indicating need for a catalytic converter replacement

Most often, catalytic converter problems turn up when reading codes or performing emissions testing. However, there are physical symptoms that may indicate need for converter replacement:

- Broken or rusted-out converter body or end tubes.
- Physical damage to the converter body.
- Presence of a rattle in the converter. A thump on a monolithic converter should make a solid sound to indicate that the substrate is present and is still in one piece.
- Fragments of substrate in other sections of the exhaust system.
- Indications of overheating on converter body.

Converter Basics

A catalytic converter has three main components:

- The converter body, which includes the “can,” pipes, and matting used to hold the brick in place.
- The converter substrate – usually a high performance ceramic “brick,” engineered with thousand of tiny channels through which the exhaust gases pass. The substrate can also be constructed of a metal mesh.
- The washcoat, which coats the substrate with a combination of precious metals: platinum, palladium, and / or rhodium.

In addition to these components, many converters will have O2 sensor ports and air tubes.

How a catalytic converter works

As exhaust gases pass into the converter and through the substrate, the washcoat creates chemical reactions that lower the level of emissions emitted from the tailpipe.

A catalytic converter needs two factors to operate properly: sufficient operating temperature (the “light off” temperature) and a steady stream of feed gas. Once the “light off” temperature is reached, the catalytic conversions occur: 1) oxides of nitrogen (NOx) are reduced into nitrogen and carbon dioxide, and 2) hydrocarbons (HC) and carbon monoxide (CO) are oxidized to create water vapor.

Converters typically start to work at around 550°F. The majority of the purification takes place once the converter reaches at least 750°F.

Diagnosing catalytic converter failures

When a converter malfunctions, it can be due to an engine performance issue or an issue with any of the components in the fuel, engine, and exhaust systems. Typical issues include faulty O2 sensors, incorrect air/fuel ratio, unburned fuel entering the unit, chemical additives in the fuel, malfunctioning sensors, ECM failure, and road damage. One or more of these conditions can trigger a change in emissions at the converter, causing the ECM to record a code that indicates “Catalyst Efficiency Below Threshold”.

If a catalytic converter has failed, it is up to the technician to thoroughly diagnose the problem to find out what caused the failure. If this is not done, it will eventually lead to failure of the new converter.

Codes P0420 and P0430 indicate that the “catalyst system efficiency is below threshold bank 1 or 2.” In other words, the vehicle’s oxygen sensors downstream noticed that the converter is not working as efficiently as it should be. However, code P0420 and P0430 can occur for a variety of reasons other than converter failure or malfunction. It is important to properly diagnose and identify any problem or problems before installing a new catalytic converter.

For tips on diagnosing catalytic converters, go to the “Education” section of our website:

<http://www.easterncatalytic.com/education>

Converter replacement requires ECM reset

When a converter is replaced, the technician will need to perform a drive cycle in order to correctly reset the ECM. Follow the manufacturer guidelines for the correct drive cycle.

Conditions that can lead to a Code P0420 and P0430:

Fuel trim too high

- Vacuum leaks
- Intake leaks
- Bad mass-air flow sensor

Fuel trim too low

- Stuck fuel injectors
- Bad fuel pressure regulator

O2 sensor problems

- Failed or “lazy” sensor
- Sensor contamination by antifreeze, additives, oil, unburned fuel, or service chemicals/sealants

Maintenance / operation problems

- Overloaded vehicle
- Incorrect engine timing
- Carbon deposits

Mechanical / electrical issues

- ECM failure
- Defective electrical parts: plugs, wires, coils
- Improper compression
- Leaking valves
- EGR failure
- Exhaust leaks
- Worn camshaft
- Transmission problems
- Improper fuel system performance
- Blown head, intake, or exhaust gaskets
- Bad valve timing
- Cooling system issues

Remember: Fix the problem that caused the original converter to fail.

All products in this catalog are not legal for sale or use in California

www.easterncatalytic.com

Causes of converter failure and the Eastern Catalytic warranty.

There are three basic types of converter failure: physical, thermal, and chemical. The issues shown here VOID the EMI warranty and are NOT eligible for credit. Check your converter before you return it:

Is the part missing a stamp code that verifies it is an Eastern Catalytic product?

- Check stamp code for EM or TD.

Shake the part – is there rattling from inside?

- Rattling is typically heard when the substrate inside is loose or broken.
- Was the part physically damaged due to impact that may have caused the substrate to break?
- Does the part show visible signs of extreme temperature that would cause loss of efficiency, matting failure / loose substrate?

Look at the tubing and the shell of the converter – Does it show signs of extreme heat?

- Deep gray, black, and dark purple are signs of extreme temperature caused by an improper running or misfiring engine.

Look inside the converter, is the substrate missing, plugged up, melted?

- These are all signs of an improper running engine or contaminants in the exhaust that have plugged the face of the catalyst or melted the catalyst due to extreme heat.

Check the picture of the part in the Eastern catalog, is it missing any pieces of the converter tubing or converters?

- There are some 2 or 3 piece units that must be returned complete with all pieces.

NOTE:

Failures caused by these problems are not covered by the warranty.

Environmental Protection Agency (EPA) Requirements

The EPA has established four basic situations when you can install an aftermarket converter:

- If the converter is missing from the vehicle when brought in for exhaust system repair.
- If a state or local inspection program has determined that the existing converter has been poisoned, damaged, or otherwise needs replacement.
- If the vehicle exceeds the factory emissions warranty and a legitimate need for replacement has been established and appropriately documented (e.g., a plugged converter or unrepeatable exhaust leaks).
- If an OBD II vehicle's mileage exceeds OEM warranty and the fault code identifies that the converter needs replacement.

The last two points are very important.

The original converter on a vehicle is designed to last the lifetime of the vehicle if the vehicle is properly maintained and no engine malfunctions occur. The EPA requires the vehicle manufacturer to warrant the original converter for at least five years or 50,000 miles (8 years or 80,000 miles for OBD II), whichever comes first. Any converter within this warranty period must be replaced with an original equipment converter.

Aftermarket converters cannot be used for replacement:

- If the existing converter is present and functioning properly.
- If the replacement is under recall or warranty.
- If the vehicle is returning from overseas use, unless accompanied by EPA forms permitting the installation.

When replacing a converter:

Once you have determined that you may replace the converter, look up your application in this catalog to determine the appropriate replacement converter.

The converters in this catalog are not legal for sale or use in California.

Eastern Catalytic produces a separate catalog for California-approved converters.

- Converters may only be used within the limits of their compliance. Vehicle weight and engine size must not exceed those listed for each converter in this catalog.
- A two-way converter may not be used to replace an original equipment, three-way converter.
- A three-way converter may be used to replace an original equipment two-way, only if it has been approved for that purpose.
- An OBD II compatible converter is required for all OBD II applications.

The EPA requires that the catalytic converter installer:

1. Fill out the warranty card supplied by the manufacturer.
2. Send the top portion to the manufacturer.
3. Give the middle portion to the consumer, and keep the bottom portion.

Remember: Fix the problem that caused the original converter to fail.

All products in this catalog are not legal for sale or use in California

www.easterncatalytic.com

Eastern Catalytic Limited Warranty

The manufacturer warrants that the catalysts in our converters are free from defects in material and workmanship which cause such catalysts to fail to conform with emission reduction requirements specified by the U.S. Environmental Protection Agency for a period of 50,000 miles from the date of installation of said catalytic converters. The manufacturer warrants that the external shell, including end pipes, shall be free from defects to materials and workmanship for a period of five years or 50,000 miles from the date of installation, whichever comes first. The required warranty for non-OBD II catalyst performance is 25,000 miles, but **due to the high level of confidence in our products, we have increased the warranty to 50,000 miles.**

This warranty is conditioned upon the converters being properly installed on the vehicle(s) for which they are designated and cataloged and the said vehicle(s) maintained in proper operating condition according to original specifications. The manufacturer will replace any such defective converter provided that it is returned to an authorized dealer along with the proof of purchase and

properly completed warranty certificate. If the warranty claim relates to emission performance, proof of failure of an emission test should be provided.

Manufacturer may request proof that the engine was tuned to original specifications and maintained in proper operating condition. This warranty does not cover converters that have been damaged from accidents, road debris, or the use of leaded fuels. This warranty shall give you specific legal rights. The only obligation of the manufacturer under this warranty is to supply the purchaser with a new catalytic converter assuming all warranty conditions are met. You may also have other rights which vary from state to state.

Our catalytic converters will not in their operation, function, or malfunction result in any unsafe condition endangering the motor vehicle(s), its occupants, or other persons or property in close proximity to the vehicle(s) when properly installed on the vehicle(s) for which they were intended.

Eastern Manufacturing Inc. 2017 Catalytic Converter Return Policy

Eastern warranties all converters for 5 years or 50,000 miles with proper paperwork completed and Return Goods Authorization # (RGA#). Shipping for any warranty claim must be pre-paid to our Langhorne, PA facility unless instructed otherwise. All returned products must have the RGA# clearly written on the outside of the box or on a tag or label and all parts must have our warranty form completed for warranty review.

Converters that can be classified as DEFECTIVE are relatively rare; we would like to again provide guidelines to help you determine when a defective converter actually exists.

Manufacturing defects

These are defects which occur during the manufacturing process and escape our quality control process. They include:

1. Welds that may have spaces around the inlet and outlet pipes or between the seams of the two shells that escape detection and cause a leak that is sometimes detected by a high pitched whistle.
2. A spot weld that holds the heat shield to the converter body, which may not have adhered correctly resulting in a loose heat shield at the weld point.
3. A part that does not fit the vehicle it is specified for due to possibly incorrect pipe bending, inlet/outlet flaring, incorrect flange or flange rotation, damage in shipping, etc.

These defects rarely occur, but converters diagnosed with these problems that are in the original condition with all included gaskets and components, may be returned for credit with prior Return Goods Authorization (RGA).

(Return Policy continued on next page.)

Structural defects

All catalytic converters have a five (5) year warranty against structural failure. Structural failures include:

1. A failure during the established (an invoice with a proof of purchased date) warranty period caused by perforation rust (a hole rusted completely through the converter body or pipes).
2. Any other failure to the structure of the unit that was not caused by impact or abuse. If a converter had a dent, from impact, that either causes the substrate to crack or break or the structure to sustain physical damage, it is not the responsibility of the installer or manufacturer and may NOT be returned for credit.

Performance defects

All Eastern Catalytic converters have a 50,000 mile performance warranty (Federal Law is 25,000 miles). Performance failures are difficult to determine.

1. Converters that show signs of excessive heat, usually by being discolored, and fail any performance criteria, are not defective, but instead have been abused by an improperly functioning engine, usually the result of an excessive rich condition that expels high amounts of unburned fuel into the converter causing temperature spikes. These converters are NOT defective and may NOT be returned for credit.
2. When a converter is installed due to a MIL or "check engine light" illumination, and the new converter fails to remedy to the problem, it may be that the converter was not the cause of the problem originally. There are over 1,200 diagnostic codes which can trigger the MIL or the "check engine light." Only eight (8) of those codes deal with the right and left converters operating below efficiency. Documentation from a trained mechanic indicating the code number designation, diagnostic details, and repair must be included with returned converter to obtain credit.

Examples of Converters NOT covered under warranty:

Remember: Fix the problem that caused the original converter to fail.

All products in this catalog are not legal for sale or use in California

BTO - Build to order

Just because you don't see a particular application in this catalog, doesn't mean we can't build it for you!

Our Build To Order (BTO) program has created special converters for applications ranging from marine and aircraft to power generation and small engines.

Put our engineers to work for your special converter needs. Let us know what your requirements are, and we'll let you know what we can do.

ECO II

BETTER For all post '96 applications. Designed to be compatible with second-generation on-board diagnostics (OBDII).

ECO III

BEST Higher precious metal loading. Designed to keep the Check Engine Light (MIL) off on high mileage and low emissions OBDII applications.

SELECT +

ULTRA Contains approximately 40% higher precious metal content than most other aftermarket brands. Faster light off and higher substrate volume.

Why do catalytic converters fail?

Replacing the catalytic converter without fixing the cause of the failure may lead to another ruined converter!
Common causes of failure are:

- Engine tune-up required
- Excess fuel entering the exhaust system
- Oil or anti-freeze entering the exhaust system
- Oxygen sensor malfunction
- Road damage or broken hangers
- Contamination from additives

Melted Brick
Engine operating too hot.

Oil-Fouled Brick
Engine oil is getting into the exhaust.

Burned Converter
Exhaust temperature too hot.

Plugged Brick
Incomplete combustion by-products have plugged the holes.

Road Damage
Impact under the vehicle crushed the converter.

Failures caused by these problems are not covered by the warranty!

All products in this catalog are not legal for sale or use in California

Just because you don't see a particular application in this catalog, doesn't mean we can't build it for you!

Calculation:

To determine the test weight of your vehicle, use the formula:
Equivalent Test Weight (ETW) = Curb Weight + 1/2(GVWR - Curb Weight)

STND

GOOD Over 47,400 applications including Direct-fit, Universal, Manifold Converters, Diesel, and more.

ECO II

BETTER For all post '96 applications. Designed to be compatible with second-generation on-board diagnostics (OBDII).

ECO III

BEST Higher precious metal loading. Designed to keep the Check Engine Light (MIL) off on high mileage and low emissions OBDII applications.

Bullet Cat™

Eastern Bullet Cat Converters feature fully welded tube construction and are available with either a 400 cells per square inch ceramic substrate or a 200 cells per square inch metallic catalyst.

Ceramic

Ceramic flow through catalyst – 400 cell / in²

Metallic

Metal foil catalyst, flow through design – 200 cell / in²

Tru Performance™

Eastern Tru Performance Converters feature a 300 cells per square inch ceramic substrate for improved exhaust flow with higher horsepower and torque.

Polished or Satin -

Tru Performance polished converter bodies are built with 304 stainless steel shields and shells and are polished to 4/11 mirror finish.

Tru Performance satin-finish converter bodies are built with 409 stainless steel.

We provide the widest range of Diesel Catalytic Converter applications for cars, light trucks, heavy-duty and off-highway vehicles, buses, heavy-duty trucks, forklifts, and stationary engines.

Our Diesel converters employ one of four different catalysts, depending on the application requirements:

Ceramic Oxidation

Ceramic flow through catalyst – for control of HC and CO

Ceramic Wall Flow

Ceramic wall flow catalyst – to trap particulate matter (PM) and also control HC and CO

Metallic Oxidation

Metal foil catalyst, flow through design – for control of HC and CO

Metallic Mesh

Catalyzed metallic mesh – designed to trap particulate matter (PM) and also control HC and CO

Custom fabrication and application-specific designs:

We provide custom fabrication for Diesel applications, including large displacement and stationary engines.

Contact us for more information:

800.553.7199 [In PA: 215.702.3600]

Or see our website for our custom request form:

www.easterncatalytic.com

Application and performance may vary depending on application weight, engine specifications, and fuel quality.

Contact Eastern for more information on mobile and stationary engines larger than 8.0L. Specialty catalyst configurations and exhaust tube sizes are available.

1. Engine Make and Model: _____

2. Engine Size: _____ Displacement: Liter _____ CID _____ CM3 _____

3. Engine Cycle (check one): ☐ 4 Stroke ☐ 2 Stroke

4. Engine Rated Power: _____ kW _____ HP

5. Engine Rated Speed: _____ RPM _____ H2

6. Engine Aspiration (check one): ☐ Natural ☐ Turbocharged ☐ Turbo aftercooled

7. Exhaust Configuration (check one): ☐ Single tailpipe (1 converter per engine)
☐ V Configuration, 1 converter per bank (2 converters per engine)

8. Exhaust Temperature at Idle: _____ °C _____ °F

9. Exhaust Flow Rate: _____ m3/h _____ m3/min _____ ACFM

10. Engine Pipe Diameter (mm or inches): _____ Inlet _____ Outlet

11. Converter Attachment Style (check one): ☐ Welded ☐ Clamped

12. Driving Type (check all that apply): ☐ Line Haul ☐ School Bus ☐ Highway
☐ City ☐ Stationary

13. Country of Use: _____

14. Emission Control Regulation Target: _____
% Reduction in: HC _____ CO _____
NOx _____ PM _____

Staying ahead of the industry by leaps and bounds.

Converters have become more complex, but Eastern has the answers. We have every shape, size, and type converter you may need and the engineering expertise to recommend which part to use and why.

Should you use Universal or Direct-fit? Standard catalyst or our ECO Series with higher loadings? Ask Eastern. We have the products and experts to solve today's toughest emissions problems, the first time, every time.
